

5 WAYS TO HELP SAVE CORAL REEFS

1 Reduce, Reuse, Recycle!

Dispose and recycle of your trash properly. Joining beach clean-ups is a great way to help as marine trash can be very harmful to coral reefs.

2 Look, Don't Touch!

Corals are very sensitive and fragile. Please be cautious if you snorkel, dive, or swim near any coral, and do not step, touch, or kick them.

2

3 Minimize Fertilizer Use!

Runoff from land leads to harmful impacts on coral reefs, ultimately threatening their life. Try to limit fertilizer use or find an organic fertilizer.

4 Try Sustainable Fish!

Supporting sustainable seafood helps reduce the pressure on coral reef ecosystems from destructive fishing practices, allowing them to recover and thrive.

5 Share Your Knowledge!

Spread the word! This raises awareness about the importance and threats coral reefs face, inspiring others to take action to protect them.
